

**Amendments to the Specification:**

**Please amend paragraph [0008] of the substitute specification filed on January 24, 2005 as follows:**

[0008] As for matters that demand attention in an attempt to administer an enteral nutrition product to a patient, suppression or reduction of gastro-esophageal reflux is referred to. The reason is that gastroesophageal reflux can be a cause of reflux esophagitis, aspiration pneumonitis, etc. While ~~reflex~~reflux esophagitis is an esophagitis resulting from the stimulation of the gastric acid within the contents regurgitated from the stomach, aspiration pneumonitis is pneumonitis due to the invasion of the regurgitated contents into the trachea.
